CE-TEK are specialist enclosure manufacturers, who have developed a range of outdoor cabinets for housing a wide variety of defibrillators.

These have been developed due to the ever growing demand of AEDs, which need to be accessed around the clock in a wide variety of locations, including remote villages, sports stadiums, public areas and even mountain regions! It is of great importance that AEDs can be accessed 24 hours a day, 7 days a week and be ready to use, which is why our cabinets have been designed specifically for this purpose and incorporate the following features:

- Manufactured from high grade stainless steel to protect against corrosion (As standard on deluxe cabinet)
- IP65/66 rated to withstand even the harshest of weather conditions (As standard on whole range)
- Marine grade stainless steel keypad lock to protect against theft and vandalism, whilst ensuring the lock will remain fully functional in all weather conditions. ¹
- Thermostatically controlled heating system to ensure the AED is always within its working temperature range. ¹

- Automatic internal lighting so the AED can be accessed with ease whatever time of day it is. ¹
- Power on indicator for quick and easy maintenance checks to ensure the cabinet is fully functional. ¹
- Viewing window so that the AED status light can be seen externally. ¹
- All our range of cabinets are painted in high visibility yellow as standard but can be painted in any colour of your choice. ²
- All of our cabinets include screen printing as standard with the option to add your own logo or benefactors information as required. ²

1 - Included on Deluxe, optional on Standard cabinet 2 - A small extra cost
